

KENTARO VADNEY

Alameda, CA, 94502 | (424) 533-9384 | kentarovadney@gmail.com | [LinkedIn](#) | [GitHub](#)

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, Rust, SQL, Solidity, HTML/CSS

Frameworks/Libraries: React, Next.js, Vite, Node.js, FastAPI, Flask, Express, Django, Angular, Tailwind, PyTorch

Cloud & DevOps: GCP (Cloud Run, Cloud Build), AWS, Docker, Kubernetes, Terraform, GitHub Actions, CircleCI, Jenkins

AI / LLM: Anthropic API, OpenAI API, Gemini, Claude Code, multi-agent orchestration, RAG, prompt caching, evals

Databases: PostgreSQL, MySQL, MongoDB

Platforms: Jira, Confluence, Notion, Coda, Zendesk, CursorAI, Windsurf

EDUCATION

University of California, Berkeley

Aug 2019 – May 2023

B.A., Computer Science

🏆 **REGENTS' & CHANCELLOR'S SCHOLAR**

🏆 **UCSB Hackathon 2020 Grand Prize - ML App**

Research Focus Areas:

- Distributed Systems
- AI Labor Market Analysis
- Natural Language Translation

EXPERIENCE

Founding Engineer @ Veru365

Mar 2026 – Present

- Architecting a multi-tenant wealth-management SaaS for RIA firms — [FastAPI/Python](#) backend, [Next.js/TypeScript](#) frontend, [PostgreSQL](#) with row-level security, [Auth0](#), and per-tenant compliance schema for SEC/OCC/NCUA
- Deployed on [GCP](#) ([Cloud Run](#), [Cloud Build](#), [Terraform](#)) across staging and production with automated CI/CD, [Alembic](#) migrations, and GitHub-Actions-driven release gating
- Built an AI agent suite (Harvey stock strategist, Freddy FPA planner, EVS / Attaboy / Insider screeners) on the [Anthropic](#) and [Gemini](#) APIs with RAG, evals, and multi-agent orchestration; ran nightly [Claude Code](#) worker fleets to parallelize feature delivery
- Integrated [Plaid](#) for account aggregation and [Persona](#) for KYC/IDV; implemented PII encryption at rest, audit logging, and WORM-retention controls for compliance review
- Authored 7 patent specifications spanning the PAGO data layer, multi-agent financial planner, per-tenant KMS encryption, and differentiated RAG; targeting provisional filings starting June 2026

Software Engineer — Independent Contractor / Consultant (Full-time)

May 2024 – May 2026

- [Mercor](#) — SWE & ML AI Trainer (2025–2026): contracted on Project Ignite, Project Ragnarok, and [SWE-Bench](#) Pro v2; authored and graded production-grade [Python/TypeScript](#) tasks used to train and benchmark frontier coding models
- [Centigrade](#) — Full Stack SWE (2025): led [FastAPI](#) backend services and database migrations supporting 100tx/mo; redesigned frontend routing with [React.js/Tailwind](#), cutting page load 50% and lifting accessibility scores from 30 to 90; built concept [AWS Kendra](#) index powering product-wide AI search
- [CarbonSustain](#) - Full Stack SWE (2024): led architecture and development of blockchain-based data and credit system from prototype to MVP
- Built & deployed [Node.js](#) backend with [FastAPI](#) integrations and [XRPL](#) ledger connections
- Integrated [Angular](#) and [TypeScript frontend](#) with [PostgreSQL](#) data [server](#) for scalable user-facing features
- Designed and provisioned [AWS](#) infrastructure ([EC2](#), [S3](#), [CloudFront](#), [Terraform](#)) to support live production
- Delivered custom client demos leveraging [Python](#) scripts and LLM APIs, securing enterprise pilots

R&D Software Engineer @ Belden

Jul 2023 – May 2024

- Developed container ingress features & LLM tools with [Python](#), [Java](#), REST APIs, and [Kubernetes](#)
- Re-defined Android app testing workflow, improving modularity and readability
- Re-designed AI cybersecurity models to expand product's data coverage and strengthen defenses
- Optimized EDA notebooks ([Dask](#), [Pycaret](#), visualization tools) to analyze 200+ GB CSVs

Product Analyst @ Berkeley Blockchain Accelerator

Jan 2021 – Apr 2022

- Evaluated 50 blockchain startups, several later raising \$650M+ in funding
- Researched and published industry and fundraising news to a 3k+ subscriber audience
- Deployed [Stellar](#) blockchain nodes via [onFinality](#) in [AWS Kubernetes](#) using [Docker](#), improving ecosystem reliability

Researcher @ UC Berkeley RISE Lab

Aug 2021 – Dec 2021

- Led 5-person research team on replicated state machine protocols, delivering published results
- Simulated distributed system traffic ([Python](#), [Numpy](#), [Pandas](#)) for performance testing
- Co-authored paper on round-robin consensus with symmetric encryption, contributing to academic literature

Full Stack Intern @ Astar Network

May 2021 – Aug 2021

- Deployed [Rust](#) smart contracts with [WASM](#), [Solidity](#), enabling cross-chain deployment
- Built Discord token generator bot integrated with [Polkadot.js](#), [Ethers.js](#), [Web3.js](#)
- Published developer docs in English and Japanese, driving adoption

Frontend Intern @ OkX

Jan 2021 – May 2021

- Delivered MVP features for decentralized exchange (DEX) using [React.js](#), [ChakraUI](#), [Onboard.js](#)
- Secured frontend web app with input sanitation, source limiting, and security testing
