Azimuth Venture Holdings, LLC 370 W Coleman St. Prosper, Texas 75078

Dear Hiring Manager,

I'm applying for the Full Stack Engineer and Data Scientist position at Azimuth. I'm a full-stack engineer with experience building production systems that handle real-time data at scale, and I'm ready to contribute immediately to your mission of becoming the data backbone of live touring.

Your description of needing a "data hawk" who can see patterns in chaos and build pipelines aligned with specific demographics resonates with my recent work. At Centigrade, I optimized database systems to support 5x query throughput increases and reduced latency by 60% through schema redesign and indexing strategies. I built an AWS Kendra AI search prototype that processed large document sets, cutting manual discovery time by 10+ hours weekly. At CarbonSustain, I architected a blockchain-based tracking system from prototype to MVP, building Node.js backends with real-time transaction validation and AWS infrastructure that supported enterprise pilots.

What excites me about Azimuth is the intersection of data infrastructure, algorithmic matching, and real-world impact. I thrive in environments where I need to move fast and ship working solutions. At CarbonSustain, I was one of two founding engineers building a production system from scratch. At Berkeley's RISE Lab, I led a research team investigating distributed consensus protocols and co-authored peer-reviewed work on Byzantine fault tolerance. I'm comfortable working across the stack—Python backends, SQL optimization, JavaScript frontends, AWS deployment, and CI/CD pipelines.

I'm drawn to startups that are building unprecedented systems, and your vision of combining music data, demographics, and market intelligence across 210 U.S. markets to reshape concert booking is exactly the kind of ambitious problem I want to tackle. I understand this is a part-time role for real-world experience, and I'm ready to deliver on that opportunity.

I can start immediately and I'm available for a meeting whenever works for your team. Let's build something unprecedented.

Best regards,

Kentaro Vadney
