Re: Flutter Developer Position at MaroonGroup, Inc.

Dear Hiring Team,

I'm excited to apply for the Flutter Developer role at MaroonGroup. As a full-stack engineer with 2+ years building production web and mobile services, I'm drawn to the opportunity to ship high-quality cross-platform experiences in a fast-paced startup environment where early engineers have real ownership over architectural decisions.

While my primary experience has been with React, Node.js, and FastAPI, I've built production frontends optimizing for performance and user experience—skills that transfer directly to Flutter development. At Centigrade, I redesigned a React frontend that cut Time-to-Interactive by 50% and raised accessibility scores from 30 to 90. At CarbonSustain, I integrated an Angular/TypeScript frontend with backend APIs, implementing authentication flows and RESTful API integrations for three enterprise pilots. I'm confident I can quickly ramp up on Flutter/Dart and apply my frontend architecture, state management, and API integration experience to deliver clean, performant mobile UIs.

What excites me most about this role is the opportunity to be an early technical team member who can help establish engineering best practices while moving fast on product iterations. My experience architecting systems from prototype to MVP as a founding engineer at CarbonSustain has prepared me to thrive in environments where priorities shift and ownership is high. I've consistently shipped features under tight timelines—at Belden, I re-architected testing workflows that reduced execution time by 40%, and at Centigrade, I established CI/CD patterns that compressed release cycles from multi-day to same-day deployments.

I'm particularly interested in the contract-to-hire structure and the two-week probationary period. I'm confident that once you see my ability to learn quickly, ship quality code, and collaborate effectively with product and design teams, I'll prove to be a strong long-term fit. I'm available to start immediately and excited about the possibility of growing with MaroonGroup as the mobile app scales.

Thank you for considering my application. I'd love to discuss how my full-stack experience and track record of rapid delivery can contribute to your mobile product roadmap.

Best regards,
Kentaro Vadney
