V2Soft Hiring Team

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer (Java) position at V2Soft. With over five years of experience building enterprise-level applications across the full stack, strong Java expertise, and hands-on work with RESTful APIs, microservices, and Agile teams, I am confident I can contribute meaningfully to your development team.

In my role at Belden, I developed container ingress features and internal tooling using Java, Python, REST APIs, and Kubernetes—experience that directly aligns with the enterprise web applications and internal tools your team builds. I collaborated closely with cross-functional teams to deliver production-ready solutions while following Agile processes, and I consistently participated in code reviews to maintain high standards and security compliance.

At Centigrade, I led backend development with FastAPI and drove frontend improvements with React, reducing page load times by 50% and significantly improving accessibility. At CarbonSustain, I architected and deployed a full-stack system from prototype to MVP, integrating Node.js backends with PostgreSQL databases and provisioning AWS infrastructure with Terraform. These experiences have sharpened my ability to troubleshoot production defects, design scalable systems, and deliver standards-based solutions—core responsibilities of this role.

My technical foundation includes extensive work with SQL databases, stored procedures, ORM frameworks, and MVC architectures. I have practical experience with testing frameworks and test-driven development, and my research at UC Berkeley's RISE Lab on distributed systems and replicated state machine protocols gives me strong exposure to the microservices and SOA patterns V2Soft values.

I am excited about the opportunity to join an Agile team focused on building high-performing, secure enterprise applications. I would welcome the chance to discuss how my background can support V2Soft's goals.

Thank you for your consideration.

Sincerely,
Kentaro Vadney
