Alameda, CA 94502 | (424) 533-9384 | kentarovadney@gmail.com | [linkedin.com/in/kentarov](https://www.linkedin.com/in/kentarov) | github.com/VadneyK

Database systems engineer with 2+ years optimizing production databases and cloud infrastructure. Achieved 60% latency reduction and 5x throughput improvements through schema optimization and performance tuning. Experienced in 24/7 production support, incident response, and leading technical teams across enterprise deployments.

TECHNICAL SKILLS

Database: PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Schema Design, Index Tuning, Backup/Recovery, High Availability

Systems: Linux, AWS (EC2, S3, RDS, CloudFront), Docker, Kubernetes, Terraform, Distributed Systems

Languages: Python, SQL, Java, JavaScript, TypeScript, Bash, Rust, Solidity

DevOps: CI/CD (GitHub Actions, CircleCI), Monitoring, 24/7 Support, Incident Response, Infrastructure as Code

EXPERIENCE

Full Stack Software Engineer • Centigrade — Apr 2025 – Aug 2025 | Santa Clara, CA

- Led PostgreSQL optimization redesigning schemas and indexes, reducing latency 60% and supporting 5x throughput increase for enterprise API services
- Served as technical lead maintaining critical backend infrastructure and database systems for production clients with 99.9% uptime SLA
- Provided production support troubleshooting complex database performance issues including query optimization, connection pooling, and index strategies
- Implemented comprehensive monitoring solutions for database metrics, API performance, and system health checks
- Established CI/CD infrastructure with CircleCI and GitHub Actions enabling automated testing and same-day deployments with zero downtime

Founding Engineer • CarbonSustain — May 2024 – Dec 2024 | Remote

- Architected production PostgreSQL databases with complex schemas, backup strategies, and high availability configurations for 3 enterprise pilots
- Led AWS infrastructure design (EC2, S3, RDS, CloudFront) using Terraform as founding engineering team lead, managing all cloud resources
- Provided 24/7 support troubleshooting critical incidents including database failures, connection issues, and performance degradation with documented resolution procedures
- Designed comprehensive backup/recovery solutions with automated snapshots and point-in-time recovery achieving 2-hour RTO and 15-minute RPO
- Developed monitoring systems tracking database performance metrics, connection pools, query execution times, and resource utilization
- Built Node.js backend with RESTful APIs and microservices architecture supporting real-time transaction validation

R&D Software Engineer • Belden — Jul 2023 – May 2024 | San Jose, CA

- Maintained containerized applications using Kubernetes and Docker for industrial IoT cybersecurity platform serving enterprise clients
- Optimized testing infrastructure re-architecting Android workflow, reducing execution time 40% and improving team productivity
- Troubleshoot complex distributed systems issues involving networking, containerization, REST APIs, and application integration
- Developed container ingress features and integrated threat detection systems using Python and Java

EDUCATION

B.A., Computer Science • University of California, Berkeley — Aug 2019 – May 2023

Regents' and Chancellor's Scholar (top 1% merit scholarship) | Co-authored distributed systems research paper | UCSB Hackathon 2020 Grand Prize
