

KENTARO VADNEY

Systems & Database Administration Manager

Alameda, CA 94502 | (424) 533-9384 | kentarovadney@gmail.com
linkedin.com/in/kentarov | github.com/VadneyK

Systems and Database Administrator with 3+ years managing production infrastructure, database systems, and cloud platforms. Led technical teams delivering 99.9% uptime SLAs while reducing database latency 60% and supporting 5x throughput increases through schema optimization and performance tuning. Experienced in provisioning, configuring, and maintaining enterprise systems, implementing user access controls, and ensuring adherence to security best practices and industry standards.

TECHNICAL SKILLS

Database Administration: PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Schema Design, Index Tuning, Backup/Recovery, High Availability, Replication

Cloud Platforms: AWS (EC2, S3, RDS, CloudFront, Lambda), Azure, GCP, Infrastructure as Code, Terraform

Security & Compliance: Access Control, Data Privacy, Security Best Practices, Incident Response, Audit Logging, FERPA Awareness

Systems Administration: Linux (Ubuntu, CentOS), Windows Server, User Access Management, Active Directory, System Monitoring, Performance Tuning

DevOps & Automation: Docker, Kubernetes, CI/CD (GitHub Actions, CircleCI), Ansible, Shell Scripting, Automation

Languages & Tools: Python, SQL, Bash, JavaScript, Git, Jira, Confluence, Documentation

PROFESSIONAL EXPERIENCE

Technical Contractor • Mercor — Dec 2025 – Present • Remote

- Evaluated and documented technical systems for AI agent benchmarking, analyzing code solutions and system architectures
- Developed structured evaluation rubrics and technical documentation for software engineering workflows

Full Stack Engineer • Centigrade — Apr 2025 – Aug 2025 • Santa Clara, CA

- Led PostgreSQL database administration: schema redesign, index optimization, performance tuning; reduced latency 60%, supported 5x throughput
- Maintained production database systems with 99.9% uptime SLA, providing 24/7 on-call support and incident response
- Implemented system monitoring tracking database metrics, API performance, server health, and resource utilization
- Administered user access controls and authentication systems with secure role-based permissions
- Established CI/CD infrastructure with CircleCI and GitHub Actions for automated testing and deployments

Founding Engineer • CarbonSustain — May 2024 – Dec 2024 • Remote

- Architected PostgreSQL databases with automated backup strategies and high availability for 3 enterprise deployments
- Led AWS infrastructure provisioning (EC2, S3, RDS, CloudFront) using Terraform; managed all cloud resources
- Designed backup/recovery solutions with automated snapshots achieving 2-hour RTO and 15-minute RPO
- Provided 24/7 systems support troubleshooting database failures, connectivity issues, and performance degradation
- Managed user provisioning, access permissions, and security configurations across production environments

R&D Software Engineer • Belden — Jul 2023 – May 2024 • San Jose, CA

- Maintained containerized production systems using Kubernetes and Docker for enterprise IoT cybersecurity platform
- Optimized deployment infrastructure, reducing execution time 40% through workflow automation improvements
- Troubleshoot distributed systems issues involving networking, containerization, and application integration

Additional Experience: Research & Technical Leadership (2021-2022)

- UC Berkeley RISE Lab:** Led 5-person team on distributed systems; managed cluster infrastructure; co-authored paper
- Berkeley Blockchain Accelerator:** Deployed validator nodes on AWS Kubernetes; administered blockchain infrastructure

EDUCATION

B.A., Computer Science • University of California, Berkeley — Aug 2019 – May 2023

- Regents' and Chancellor's Scholar (top 1% merit scholarship)
- Coursework: Database Systems, Operating Systems, Distributed Systems, Computer Security, Data Structures & Algorithms
